Media Queries/Desktop Sixteen Project:
Homework 10

- To convert the mobile site to the desktop site there are only two new images:
  - ∗ 3arrowDesktop.png - This is the arrow to swap out for the desktop version
  - ∗ 4siluetBGDesktop.png - This is the background image to use for the bottom of the page in the desktop version

- You can use the same logo image for both the mobile version and the desktop version as it is high enough resolution

- The new overall design and positioning images are also in the zip folder

- Media Query Specifics:
  - ∗ The default CSS should be for **mobile** devices (your previous homework creating the mobile version of the page).

  - ∗ When the page is **greater than 1000px** wide (laptop) change to the laptop/desktop version/sizing of the site:
    - Logo should be 7vw from the left of the page
    - Nav links should be 7vw from the right of the page

  - ∗ When the page is **greater than 1200px** wide (desktop) page still should be the same laptop/desktop version/sizing of the site with two differences:
    - Logo should now be 12.5vw from the left of the page
    - Nav links should now be 12.5vw from the right of the page
